

Update for the Virginia Joint Commission on Health Care

Beth A. Bortz, MPP President & CEO

The Virginia Center for Health Innovation

- Founded in 2012 as a 501(c)3
- Public-private partnership with annual funding from the Commonwealth of VA
- Mission: To accelerate the adoption of valuedriven models of wellness and healthcare
- Governed by a diverse, multi-stakeholder board of directors
- Secured more than \$23M in grants for Virginia

The Board and Advisory Leadership Council:

Advocate Health

Our Work

Convene and educate stakeholders interested in accelerating the adoption of value-driven models of wellness and healthcare in an effort to improve patient outcomes and advance Virginia's well-being and economic competitiveness.

Oversee and facilitate demonstration research to test and evaluate models of value-driven wellness and health care.

Leverage data and analytical resources that inform and enable health care providers, public health professionals, government representatives, community organizations, employers and consumers to make better decisions.

Help prepare the health care delivery system and the public for a high quality, value-driven health care marketplace which features engaged and satisfied clinicians and patients.

Key Initiatives

- Virginia Health Innovation Network (2013-Current)
- State Innovation Model Design (2014-2016)
- Heart of Virginia Healthcare (2014-2017)
- Potomac Primary Care Collaborative (2017-2018)
- Healthy Minds, Healthy Children (2017-2018)
- Smarter Care Virginia (2019-Present)

- Virginia Vaccinates (2019-2021)
- Advancing Value in Virginia's Community Health Centers (2019-Present)
- AHRQ Alcohol Risk Assessment and Counseling Initiative (2020-Present)
- ABFM "Measures That Matter" Continuity Research (2020-Present)
- Governor's Task Force on Primary Care (2020-Present)

Purpose:

To prompt action for improving the value of health care services.

Measurement Approach:

To identify and report on the delivery of both low value and high value clinical services across Virginia and its regions.

The Virginia Health Value Dashboard

Aim I: Reducing Low Value Care

- A. Utilization and cost of potentially avoidable emergency room visits (3 measures)
- B. Low value services as captured by the MedInsight Health Waste Calculator (7 measures)
- C. Inappropriate preventable hospital stays (1 measure)

Aim II: Increasing High Value Care

- A. Virginians who are current with appropriate vaccination schedules (1 measure with multiple elements)
- B. Comprehensive diabetes care (2 measures)
- C. Clinically appropriate cancer screening rates (3 measures)
- D. Mental health care (2 measures)

Aim III: Improving the Infrastructure for Value-Based Care

- A. Commercial in-network payments that are value-based (1 measure)
- B. Claims in Virginia's All-Payer Claims Database (2 measures)

Now Available Online 2021 Dashboard

http://www.vahealthinnovation.org/wp-/wpcontent/uploads/2021/04/2019-VCHI-Health-Value-Dashboard.pdf.

WHO WE ARE Incorporated in January 2012 following a recommendation from Gov. Robert McDonnell's Virginia Health
Reform Initiative, the Virginia Center for Health Innovation (VCHI) is a nonprofit, public-private partnership that seeks to facilitate innovation
by convening key stakeholders and securing the resources to accelerate value-driven models of wellness and health care throughout
Virginia. VCHI's work is focused on achieving three aims: reducing low-value health care, increasing high-value health care, and ensuring
Virginia has the infrastructure in place to measure and reward value in health care.

VCHI and its partners - health care providers, health systems, health plans, pharmaceutical manufacturers and laboratory companies, employers, consumers, and government – are committed to improving health value in Virginia. The Virginia Health Value Dashboard is our roadmap.

WHAT WE DO VCHI Improves value in health care through four core services. These are:

CONVENE AND EDUCATE STAKEHOLDERS

interested in accelerating the adoption of valuedriven models of wellness and healthcare in an effort to improve patient outcomes and advance Virginia's well-being and economic competitiveness.

OVERSEE AND FACILITATE DEMONSTRATION RESEARCH to test and evaluate models of valuedriven wellness and health care.

LEVERAGE DATA AND ANALYTICAL RESOURCES that inform and enable health care providers, public health professionals, government representatives, community organizations, employers and consumers to make better decisions.

HELP PREPARE
THE HEALTH CARE
DELIVERY SYSTEM
AND THE PUBLIC for a
high quality, value-driven
health care marketplace
which features engaged
and satisfied clinicians
and patients.

WHAT'S NEW IN THE 2021 VIRGINIA HEALTH VALUE DASHBOARD

egional Performance

 In the Statewide analysis, there are two new columns highlighting the degree of regional variation ("Regional Variation") and the top performing region for each measure ("Top Region").

Health Equity

- In an effort to bring a health equity lens to our Dashboard measures, there is a new sheet that incorporates the Area Deprivation Index. "The Area Deprivation Index (ADI) is based on a measure created by the Health Resources & Services Administration (HRSA) over two decades ago for primarily county-level use, but refined, adapted, and validated to the Census block group/neighborhood level by Amy Kind, MD, PhD and her research team at the University of Wisconsin-Madison. It allows for rankings of neighborhoods by socioeconomic disadvantage in a region of interest (e.g. at the state or national level). It includes factors for the theoretical domains of income, education, employment, and housing quality. It can be used to inform health delivery and policy, especially for the most disadvantaged neighborhood groups." Source: https://www.neighborhoodatlas.medicine.wisc.edu/
- The column "Correlation to Area Deprivation Index" uses a scale as follows:
 If rate increases as Deprivation Score increases (higher score indicates higher level of deprivation) then positive, if rate decreases as Deprivation Score increases then negative. If the absolute value of the correlation coefficient is less than .3 then Low, if greater than .3 but less than .5 then Moderate, if greater than .5 then High.

STATE AND REGIONAL COMPARISON

2019

= Same as statewide rate = Worse than statewide rate	STATEWIDE	NORTHWEST	NORTHERN	SOUTHWEST	CENTRAL	EASTERN
REDUCING LOW VALUE CARE						
Utilization and Cost of Avoidable Emergency Room Visits						
Potentially Avoidable ED Visits - As a Percentage of Total ED Visits	12%					
Potentially Avoidable ED Visits - Per 1,000 Member Months	3.0					
Potentially Avoidable ED Visits - Per Member Per Year	0.04					
Low Value Services as Captured by the MedInsight Health Waste Calculator						
Don't obtain baseline laboratory studies in patients without significant systemic disease (ASA I or II) undergoing ow-risk surgery – specifically complete blood count, basic or comprehensive metabolic panel, coagulation studies when blood loss (or fluid shifts) is/are expected to be minimal	82%	•	•	•		
Jon't obtain EKG, chest X-rays or pulmonary function test in patients without significant systemic disease ASA I or II) undergoing low-risk surgery	6%					
On't obtain baseline diagnostic cardiac testing or cardiac stress testing in asymptomatic stable patients with Grown cardiac disease undergoing low or moderate risk non-cardiac surgery	49%					
On't perform stress cardiac imaging or advanced non-invasive imaging in the initial evaluation of patients without ardiac symptoms unless high-risk markers are present	9%					
On't order annual electrocardiograms (EKGs) or any other cardiac screening for low-risk patients without symptoms	11%					
Don't routinely order imaging tests for patients without symptoms or signs of significant eye disease	16%					
				_	_	
On't place peripherally inserted central catheters (PICC) in stage III–V CKD patients without consulting nephrology	86%		_			_

The Area Deprivation Index (ADI) is based on a measure created by the Health Resources & Services Administration (HRSA) over two decades ago for primarily county-level use, but refined, adapted, and validated to the Census block group/neighborhood level by Amy Kind, MD, PhD and her research team at the University of Wisconsin-Madison. It allows for rankings of neighborhoods by socioeconomic disadvantage in a region of interest (e.g. at the state or national level). It includes factors for the theoretical domains of income, education, employment, and housing quality. It can be used to inform health delivery and policy, especially for the most disadvantage dneighborhood groups.

[&]quot;Correlation to Area Deprivation Index" was calculated as follows—if rate increases as Deprivation Score increases (higher score indicates higher level of deprivation) then positive, if rate decreases as Deprivation Score increases then negative. If the absolute value of the correlation coefficient is less than .3 then Low, if greater than .3 but less than .5 then Moderate, if greater than .5 then High.

DATA BRIEF NO. 42 | JULY 2019

Virginians Struggle to Afford High Healthcare Costs; Support a Range of Government Solutions Across Party Lines

Nationally, consumer worry about healthcare affordability is well documented but now-for the first time—a new survey reveals how affordability concerns and ideas for action play out in Virginia.

KEY FINDINGS

A survey of more than 1,100 Virginia adults, conducted from March 12 to April 2, 2019, found that:

- More than half (55%) experienced healthcare affordability burdens in the past year;
- · More than three-quarters (78%) were worried about affording healthcare in the future; and
- · Across party lines, they expressed strong support for government-led solutions.

A RANGE OF HEALTHCARE AFFORDABILITY BURDENS

Like many Americans, Virginians currently experience hardship due to high healthcare costs. All told, 55% of Virginia adults experienced one or more of the following healthcare affordability burdens in the prior 12 months:

1.) Being Uninsured Due to High Premium Costs

64% of uninsured adults cited "too expensive" as the major reason for not having coverage, far
exceeding other reasons like "don't need it" and "don't know how to get it."

2.) DELAYING OR FORGOING HEALTHCARE DUE TO COST

Nearly half (46%) of Virginia adults encountered one or more cost related barriers to getting health care during the prior 12 months, including:

- 33%—Delayed going to the doctor or having a procedure done
- · 29%-Avoided going to the doctor or having a procedure done altogether
- 25%—Skipped a recommended medical test or treatment
- 20%—Did not fill a prescription
- 18%—Cut pills in half or skipped doses of medicine
- 15%—Had problems accessing mental healthcare

Moreover, cost was by far the most frequently cited reason for not getting needed medical care, exceeding a host of other barriers like transportation, difficulty getting an appointment, lack of childcare and other reasons.

Of the various types of medical bills, the ones most frequently associated with an affordability barrier included doctor visits, dental, and prescriptions, likely reflecting the frequency with which Virginia adults seek these services—or, in the case of dental, lower rates of coverage for these services.

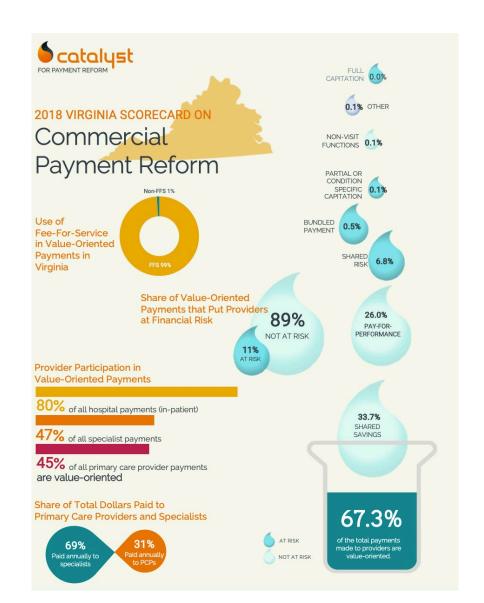

Results from Altarum's Consumer Healthcare Experience State Survey

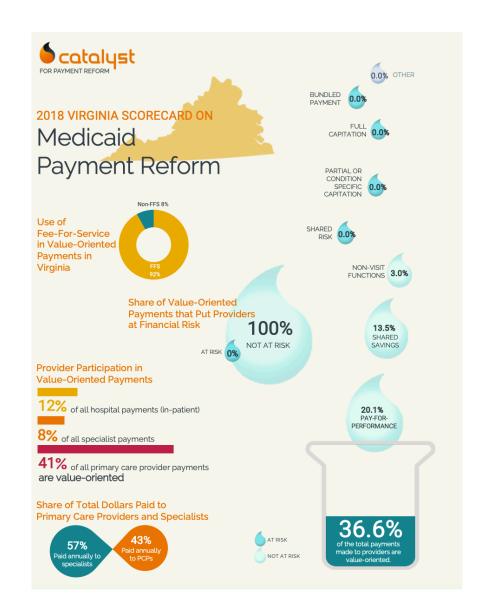

Altarum's Consumer Healthcare Experience State Survey (CHESS):

- designed to elicit respondents' unbiased views on a wide range of health system issues
- uses a web panel from SSI Research Now of ~1,100
 Virginians 18 and older
- fielded March 12 April 2, 2019
- English language only

Partnership with Catalyst for Payment Reform

- Call to action to address the urgent needs of primary care and to consider new models of resource allocation and accountability
- Emphasis on ensuring primary care maintains its ability to achieve its proven salutary effects - higher quality care at lower costs with greater equity across populations despite challenges exacerbated by the COVID-19 pandemic
- Launched July 2020
- Staffed by VCHI, funding support from Arnold Ventures for Year 1
- Commonwealth of Virginia recently announced funding support for Year 2

- Build a stakeholder coalition to direct primary care support and advance the use of data/communication systems for action;
- Define payment models to better support primary care and support practice viability through systems that allow for predictability in financial support;
- Describe the infrastructure needed to support primary care;
- Identify markers of high value care in the COVID and post COVID era to function as quality metrics; and
- Promote innovations in telehealth, population health management, and outreach to adapt to the changing COVID environment.

by Subgroup

Infrastructure	Payment Reform	Performance Measurement
Develop and prepare a Virginia Primary Care Spend Report. This will require building consensus on patient attribution and risk adjustment methodologies. Report should break out spending by type of insurance and by population (adult versus pediatric).	Work with DMAS to prepare budget amendment support documentation to secure the increased funds needed to ensure Medicaid primary care services (adult and pediatric) are paid at least at parity with Medicare — while developing a pathway to move these payments from a FFS to PMPM mechanism that includes increased accountability for inappropriate ER utilization and improved health and cost outcomes.	Continue and expand existing workgroup, finalize measure recommendations, and secure participation agreements from relevant entities. New measures should move beyond clinical quality measures, to include social determinants of health measures, patient-reported outcome measures, and population performance measures.
Develop and prepare a Virginia Overall Healthcare Spend Report. Phase one would be the preparation of a statewide report. Phase two (to be funded through new APCD federal funding and completed in 2023) would be the development of individual clinician and practice level Total Cost of Care reports.	Explore the feasibility of developing and implementing a dashboard to track primary care participation in VBP contracts.	
Develop and prepare a Virginia Plan to Enhance Communication between Public Health and Primary Care.		
Develop a detailed plan to provide Virginia primary care clinicians with the tools and resources they need to engage in VBP contracts. Supports to be researched and considered include: 1) care delivery transformation strategies and workflow optimization, 2) data and analytic support, 3) incorporating social determinants of health information into care delivery, 4) centralized care coordination and health coaching, 5) telehealth support, 6) policy expertise, and 7) contracting support.		

Where We are Headed is in Alignment with Other State Experiences

- CHCS: Advancing
 Primary Care Innovation
 Through Medicaid
 Managed Care (Profiles
 Other State Activities)
- Primary Care
 Collaborative: Primary
 Care Investment Report

Example: Colorado

- Multi-payer alignment. Multi-payer alignment is crucial to the success of alternative
 payment models (APMs), and Colorado should build upon the prior and ongoing work
 of payers and providers to advance high quality, value-based care. Practices need
 common goals and expectations across payers in order to transform care delivery and
 shift from fee-for-service (FFS) to value-based payment at the practice-level.
 Alignment across payers improves efficiency, increases the potential for change, and
 reduces administrative burden for practices.
- Measuring primary care capacity and performance. Measures used to evaluate
 primary care APMs should be aligned across public and private payers and reflect a
 holistic evaluation of practice capacity and performance.
- Measuring system-level success. Measures to determine whether increased investment in primary care and increased use of APMs are achieving positive effects on the health care system should examine various aspects of care and value.
- Incorporating equity in the governance of health reform initiatives. The governance of initiatives to support and enhance primary care services should reflect the diversity of the population of Colorado.
- Data collection to address health equity. Data collection at the plan, health system, and practice-level should allow analysis of racial and ethnic disparities.

Proposed Year 2 Deliverables

- Virginia Primary Care Spend Report
- Virginia Overall Health Care Spend Report
- Virginia Value-Based Contracting Dashboard
- Virginia Primary Care Core Measures Set with Defined Pathways for New Measure Adoption
- Virginia Plan to Enhance Communication between Public Health and Primary Care
- Virginia Medicaid Primary Care Payment Reform Model
- Virginia Plan to Enhance Primary Care Infrastructure Support
